RELAY

RADIO. IN THE BAG.

WHAT IS IT?

It's RELAY, from Lawo, and it's bringing something new to broadcasting: the Virtual Radio Mixer.

RELAY studio is a powerful mixing console that runs in a virtualized PC environment. No racks of gear to devour space and money – RELAY Virtual Radio Mixers run on a standard PC or laptop*. The intuitive, multitouch-enabled screen interface makes RELAY easy to use.

RADIO IN A BAG.

RELAY is a fully-featured portable studio, complete with analog and digital I/O and 4- or 8-fader virtual mixer. Just tuck your touchscreen laptop loaded with RELAY software into the heavy-duty RELAY backpack along with your A__OnAir4 audio interface, grab your favorite mic and headset, and you're ready to make great radio from just about anywhere. RELAY is perfectly suited to:

- Breaking News Coverage
- Sporting Events
- Sponsored Remote Broadcasts
- Air Talent Home Studios Livestream Origination
- Podcast Production
- Disaster Recovery or Emergency Broadcasts
- "Pop-up" remote broadcasts from wherever your listeners are

MORE THAN JUST MIXING.

RELAY doesn't stop with setting talent free – with RELAY, producers can go on the road, too.

Because RELAY takes advantage of today's insanely powerful modern PC platforms to mix broadcast audio, there's plenty of processing power left over. Using a variety of plug-in apps from RELAY partners, RELAY virtual mixers can actually take care of broadcast chores that a traditional console would require extra rack-mount hardware to perform.

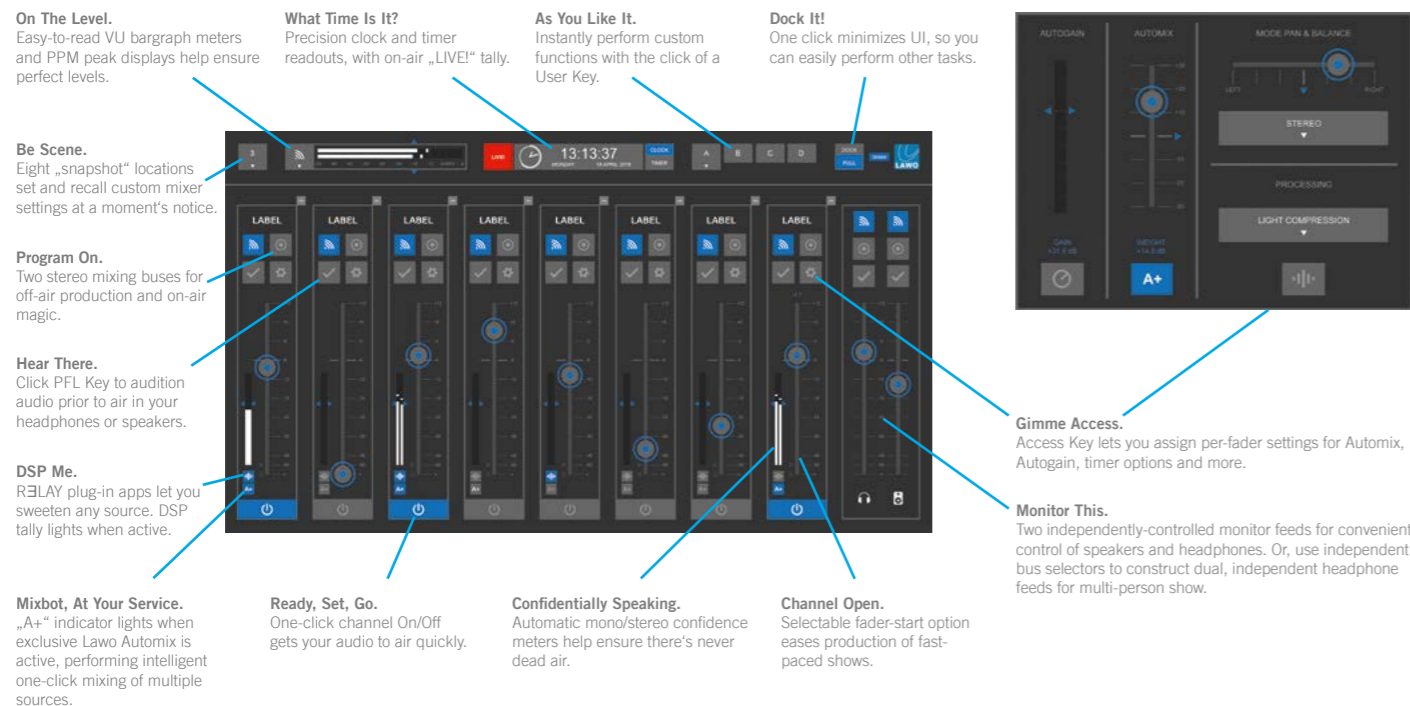

And, of course, RELAY connects with standard Audio-over-IP hardware that supports the AES67 networking standard. In fact, some clients have told us that RELAY is so powerful, they'll use it for in-station as well as on-the-go applications.

Native apps available for RELAY include the following tools:

- Voice Processing
- Final Audio Processing
- Stereo Declipping
- Profanity Delay
- Automation/Payout
- Bidirectional Codecs
- Multi-line Broadcast Phones
- Web Streaming/Encoding
- Virtual Sound Card Virtual Patch Bay

HOW WILL YOU USE RELAY?

The possibilities may just be endless. For more ideas, visit www.R3LAY.com.

* RELAY "Radio In A Bag" includes 4- or 8-fader virtual mixer software, A__OnAir4 audio I/O interface and heavy-duty backpack; Windows® 10 laptop (user-supplied) is required.
